No new features in this release.

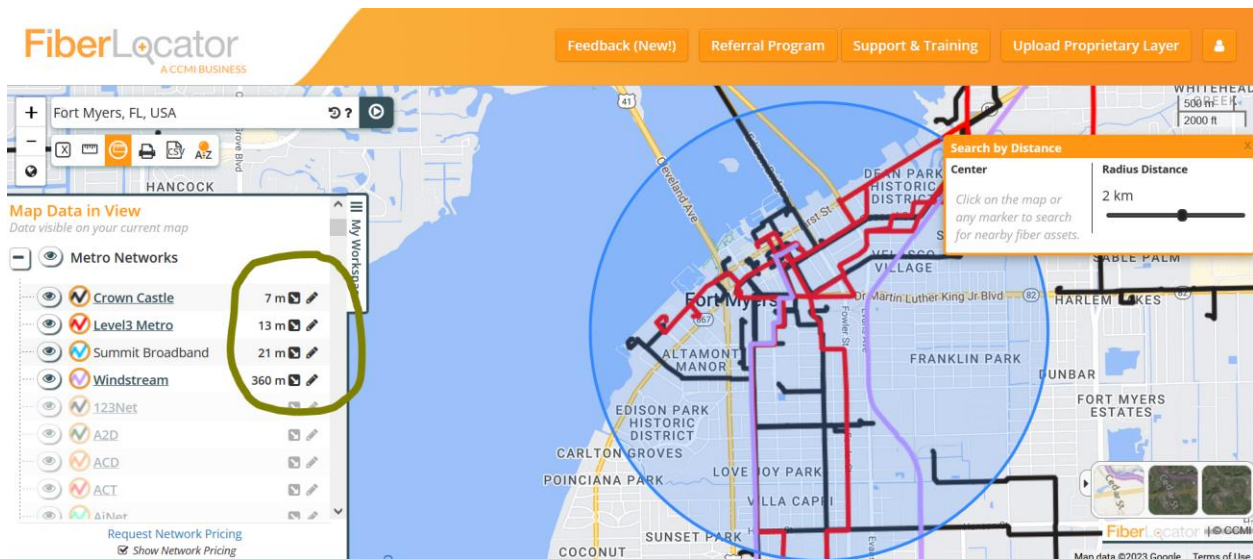

Bug Fixes

Radius Tool & Carrier Distance Display

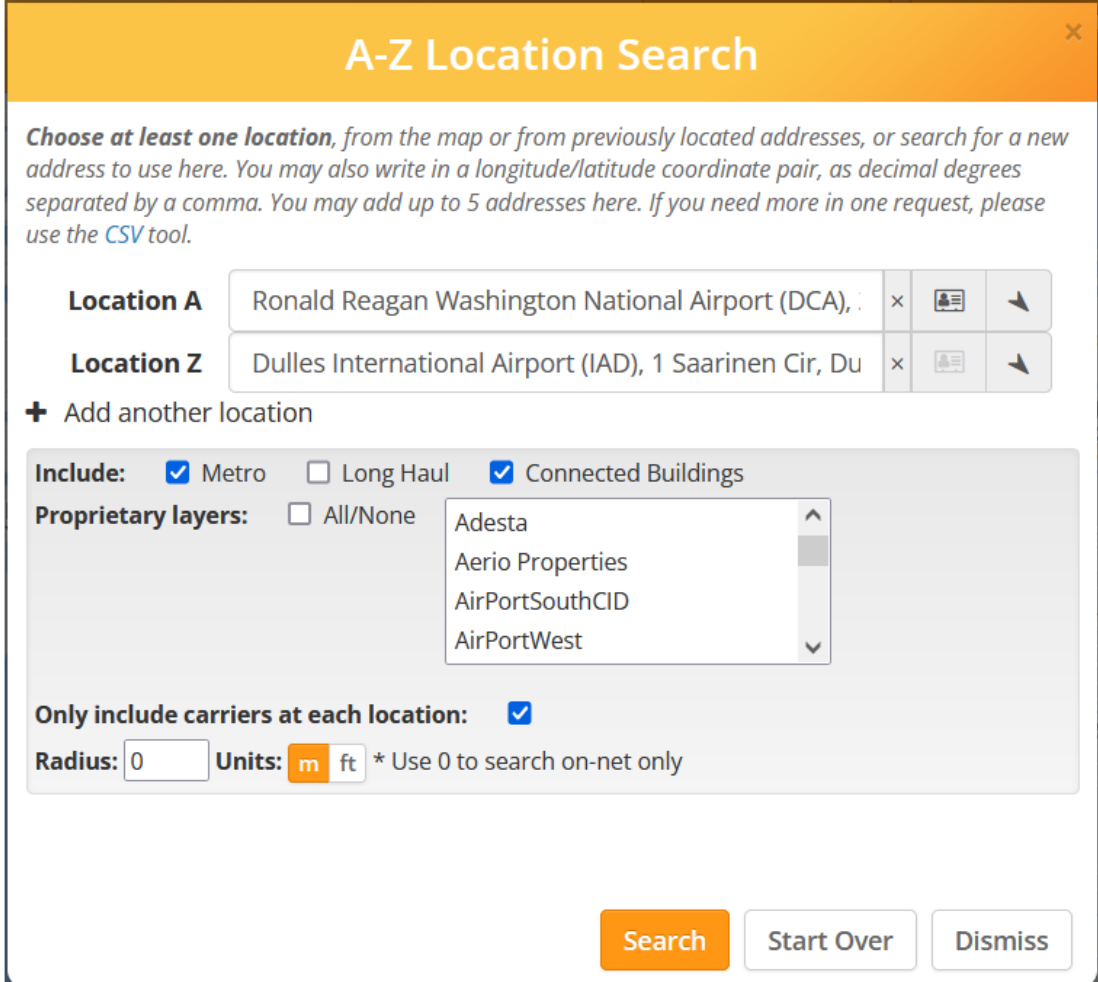

When using the radius tool in FiberLocator, all fiber assets that fall within the highlighted radius should be displayed in the *Map Data in View* list along with the distance from the center of the radius. The distance value was not always being displayed and sometimes would wrap to the next line creating an inconsistent display. These issues have now been fixed.

A-Z Location Search – On-Net Carriers

With the A-Z Location Search tool, the carrier search can be limited to on-net only by entering 0 for the radius value. This was not working properly and displaying a warning message. This option now works correctly.

The image shows a screenshot of the 'A-Z Location Search' tool interface. It features an orange header with the title 'A-Z Location Search' and a close button. Below the header, there is a descriptive paragraph: 'Choose at least one location, from the map or from previously located addresses, or search for a new address to use here. You may also write in a longitude/latitude coordinate pair, as decimal degrees separated by a comma. You may add up to 5 addresses here. If you need more in one request, please use the CSV tool.' The interface includes two location input fields: 'Location A' with the text 'Ronald Reagan Washington National Airport (DCA), : ' and 'Location Z' with the text 'Dulles International Airport (IAD), 1 Saarinen Cir, Du'. Each field has a clear button (x), a map icon, and a search icon. Below these fields is a '+ Add another location' button. A section titled 'Include:' contains three checkboxes: 'Metro' (checked), 'Long Haul' (unchecked), and 'Connected Buildings' (checked). Below this is a 'Proprietary layers:' section with a checkbox 'All/None' (unchecked) and a dropdown menu showing 'Adesta', 'Aerio Properties', 'AirPortSouthCID', and 'AirPortWest'. A green arrow points to the 'Only include carriers at each location:' checkbox, which is checked. At the bottom, there is a 'Radius:' input field with the value '0', a 'Units:' dropdown with 'm' selected, and a note '* Use 0 to search on-net only'. The interface concludes with three buttons: 'Search' (orange), 'Start Over', and 'Dismiss'.

A-Z Location Search

Choose at least one location, from the map or from previously located addresses, or search for a new address to use here. You may also write in a longitude/latitude coordinate pair, as decimal degrees separated by a comma. You may add up to 5 addresses here. If you need more in one request, please use the [CSV tool](#).

Location A Ronald Reagan Washington National Airport (DCA), : × [Map Icon] [Search Icon]

Location Z Dulles International Airport (IAD), 1 Saarinen Cir, Du × [Map Icon] [Search Icon]

+ Add another location

Include: ☒ Metro ☐ Long Haul ☒ Connected Buildings

Proprietary layers: ☐ All/None

- Adesta
- Aerio Properties
- AirPortSouthCID
- AirPortWest

Only include carriers at each location: ☒

Radius: 0 **Units:** m ft * Use 0 to search on-net only

Search **Start Over** **Dismiss**

Miscellaneous
